Election/Restrictions

1. Applicant's election of Group I in the reply filed on 1/11/07 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 4-11 and 13-21 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 1/11/07.

Information Disclosure Statement

3. The information disclosure statement filed 7/19/04 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-3 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Valuikas (4709921) or Kimura (4252315) in view of Immel (7053144).

Valuikas or Kimura shows an insole comprising a weighted lower insole layer (3 or 1 and 3) and an upper insole layer (2 or 5 and 6) and a shock absorbing member (4 or 5 and 6 on the bottom of 1 and 3) substantially as claimed except for the exact material for the weighted lower layer. Immel teaches the use of a molded compressed resin with a specific gravity of 1.4-3.4 (column 2 lines 55-67) for use in place of metals for a weighted material in footwear (column 9 line 33). It would have been obvious to use the material taught by Immel for the weighted lower layer in the insole of either Valuikas or Kimura to provide a more flexible, comfortable weighted insole.

6. Claims 1-3 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Immel (7053144) in view of either Valuikas or Yoshiaki (2002/0050079).

Immel shows a weighted device comprising a lower molded compressed resin layer (822), an upper layer (826) and a bottom shock absorbing layer (824) substantially as claimed except for the device being shaped as an insole. Immel suggests the use of the weighted device in footwear (column 9 line 33). Either Valuikas or Yoshiaki teaches the use of weighted devices shaped as insoles. It would have been obvious to shape the device or Immel as an insole as taught by either Valuikas or Yoshiaki to allow the device to be easily used in footwear.
